MINIGLOSSARY CAPACITORS

Anode: One of two plates or conductors. In polarized capacitors, the anode should be connected to the positive conductor in the circuit.

Capacitive Reactance: The measure of the opposition of a capacitor to accepting a charge and expressed in ohms. When direct current is applied under stated conditions capacitive reactance becomes a constant but, when alternating current is applied the capacitive reactance varies until an equilibrium is achieved and the capacitor appears to have only direct current present. This condition is commonly used in filter applications or in coupling circuits.

Cathode: One of two plates or conductors. In electrostatic capacitors the cathode is metallic. In electrolytic capacitors the cathode is a liquid, gel or other conductive material which is in intimate contact with a metallic cathodic connection.

Dielectric Constant: The measure of quality of the insulating materials in a capacitor. Dry air has a dielectric constant of one (1). Aluminum oxide used in aluminum electrolytic capacitors has a nominal dielectric constant of ten (10).

Electrolytic: A capacitor with one metallic conductor (generally the anode) and with a liquid or semiconductor cathode. Nonpolarized electrolytic capacitors generally have two equal anodes as well as the liquid cathode. These anodes operate alternately as anode and cathodic connection as alternating current is applied.

Electrostatic: One of two general classes of capacitors in which two or more discrete metallic conductors are present and separated by an insulating dielectric material. Examples include: mica, ceramic, film, and paper types.

Farad: The basic unit of measure in capacitors. A capacitor charged to one volt with a charge of one coulomb (one ampere flowing for one second) has a capacitance of one farad. Capacitors are generally rated at portions of a farad (microfarads or picofarads).

1 farad (F) = 1,000,000 microfarads (μF) 1 microfarad (μF) = 1,000,000 picofarads (pF)

Impedance: All capacitors exhibit impedance. It is a function of capacitor type and internal construction. This can be particularly important in certain applications such as filters for switching power supplies. Capacitors used in these applications often have special multiple tab construction to shorten current paths and to reduce internal resistance.

Leakage Current: Expressed as dcl for electrolytic capacitors, a measure of the intrinsic losses in a charged capacitor. Generally speaking, the lower the dcl, the higher quality the capacitor.

Power Factor: A measure of the overall efficiency of a capacitor. Power factor ratings take all internal losses into consideration in a complex formula. This parameter of certain capacitors is often very important in AC applications such as motor-start and/or motor-run capacitors.

Rated Voltage: The rated working voltage of a capacitor. Generally expressed in DC Volts (Vdcw). This is the voltage at which a capacitor may be safely operated at 25°C continuously within its overall parameters.

Ripple Current: The total amount of alternating and direct current that may be applied to an electrolytic capacitor under stated conditions. In general, the higher the ripple current applied, the shorter the operating life of the capacitor will be. Application of significantly higher than rated ripple currents can shorten the capacitor life dramatically and may even cause catastrophic failure (explosion).

Surge Voltage: The momentary surge voltage which may be applied for a stated length of time without doing permanent damage to the unit.

Temperature: Capacitors are generally rated at 25°C at sea level under specific humidity conditions. Operating temperature ranges are also given, along with derating (reliability) curves for operation at temperatures other than 25°C.

Temperature Coefficient: Expressed as TC in ppm (parts per million) or in percent (%) from the norm of 25°C. This is seldom a straight line and may vary widely for certain types. Most capacitors have positive TC in that the capacitance increases as temperature increases. Some types, however, have negative TC in that the capacitance decreases as temperature increases.

There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

MINIGLOSSARY CONNECTORS

Connector terminology is often quite confusing. This confusion starts with the very names of connectors. The name of a connector may derive from its shape, application, type of conductor or even method of termination.

Shape—Circular, cylindrical, and rectangular.

Electrical application—High voltage, RF, microwave, input/output, etc.

Mechanical application—Printed circuit, rack & panel, cable, etc.

Conductor type—Coaxial, flat cable, ribbon cable, flex circuit, etc.

Termination method—Wirewrap, soldercup, solderless, etc.

Hardware such as clamps, hoods, and adapters are frequently used to convert cable connectors to rack and panel types. This adds to the name confusion. A very common telephone connector, for example (the "C" type) got its name from the model number of the original maker.

Contact: The part(s) of the connector that actually provides circuit continuity between its two sections—the parts which are normally mated. The back end of the connector should properly be called the *termination*. This is the point where the wires or PC board is attached to the connector.

Contact alignments: Often called *contact float*. Describes the amount of allowable contact movement within the connector body. Permits self-alignment.

Male vs. female: In the U.S. this describes the contact construction. In Europe this term is more often used to describe the outer shell mating action which may be the reverse of the contacts.

Closed entry: A female contact which prevents entry of a male contact larger than a specific size.

Open entry: A female contact designed for a specific size of male contact but which will allow entry of larger male contacts by spring action.

Hermaphrodite: Contacts or connector bodies which are the same configuration. Male/female designations do not apply. Bodies usually have some mechanical means for maintaining polarity.

Hermetic seal: Glass-to-metal seals at terminations. Often used improperly to describe vacuum-tight seals.

Waterproof seal: May or may not be truly *waterproof*. May prevent easy entrance of casual water by means of a rubber or other boot.

Printed circuit connector: Connectors which are used in conjunction with printed circuit boards. There are two distinctly different styles.

Edgeboard. May be called *edge* or *card*. The printed circuit (PC) board edge enters the connector.

Two-piece: One part of the connecting pair is physically attached to the PC board itself. The other part is attached to something else such as a cable or a motherboard.

Readout: Describes the arrangement at the terminating edge of a PC board. May be single or double. A double readout PC board has termination strips on each side not usually interconnected.

Ribbon connectors: A type of connector which allows flat "ribbon" cable to be attached to a round or rectangular connector but also used interchangeably for flat connectors to flat cable.

Ribbon contact connector: Describes the contacts in a rectangular connector which have a self-wiping mating action. Not the same as ribbon connector.

Solderless terminal: Any style of termination which does not require solder for a permanent connection. See *crimp* and *insulation displacement*.

Crimp termination: A stripped wire is inserted into a barrel or trough which is then crimped to the conductor with a suitable tool.

Insulation displacement: Unstripped insulated wire is fitted into a channel containing metal teeth which are forced through the insulation to make contact with the conductor.

Service rating: The maximum rated voltage and/or current which may be applied continuously. May be called *working voltage*. Can be confused with the term used to describe how many times a connector may be mated and separated.

Withstanding voltage: Also called *test voltage*. The voltage a connector must withstand for one minute without breakdown. Applied between connectors and between connectors and shell and any grounding devices of the connector.

MINIGLOSSARY POWER SUPPLIES

Ambient reference: Refers to the temperature of the still air surrounding the power supply

Case reference: One of the specs that make up the nominal rating. The temperature of the case with the temperature of the surrounding still air at a stated temperature (usually 25°C).

Crowbar circuit: Protects the load. A protective circuit that applies a short circuit across the output immediately upon overload. (See overvoltage).

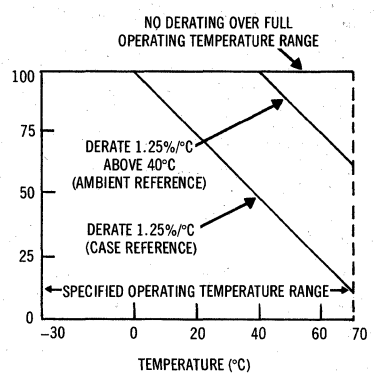

Fig. 1. Power output derating can be referred to ambient or case.

Derating: The degree output is reduced as temperature increases. Usually referenced to ambient case temperature and shown on a graph.

Efficiency: Ratio of the output power to the required input power. Usually expressed as a percentage given nominal environmental temperature.

EMI/RFI: Interference electronic circuitry caused by energy from electromechanical or radio frequency power supplies.

Foldback: Built-in protective circuits that automatically reduce the output voltage and/or current to very low levels in the event of an overload.

Holdover (Holdup): The interval that rated output will continue after input ceases. Usually milliseconds.

Input reflected current: The peak-to-peak alternating current generated by switching transients in DC/DC converters. Should not exceed 1%.

Inrush current limiting: Built-in circuits that monitor high currents through the rectifiers to the capacitors at turn ON. Circuit is usually inhibited as capacitors attain full charge.

Nominal rating: The spec value of the supply at stated conditions of input, output, and temperature.

Overshoot: A transient voltage change occurring during turn ON or OFF or during an abrupt load change.

Overvoltage (Overload) protection: Built-in circuits that protect the load or the supply by shutting it down or providing foldback.

Recovery: The time interval between the termination of an overload and restoration to normal operations.

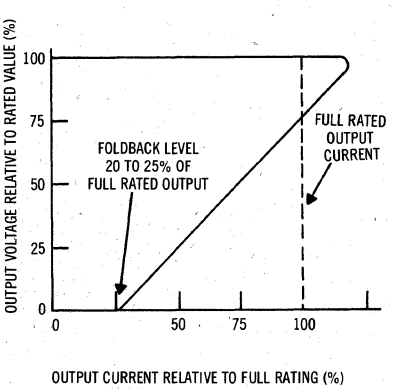

Fig. 2. Current foldback limiting self-resets with removal of fault.

Response: The time interval between a stated step change in input voltage or load current and return of output to normal operating conditions.

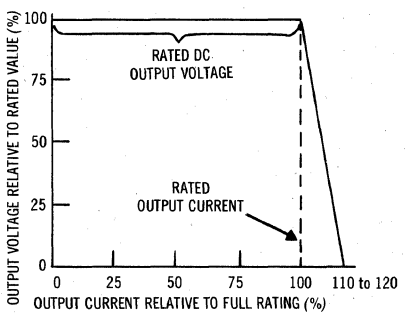

Fig. 3. Current limiting restrictions output current to a valve somewhat greater than full rated output; it resets when fault is removed.

Sensing: Regulation techniques that monitor output voltage and/or current. *Local sensing* refers to the output terminals. *Remote sensing* allows a feedback from the load circuit to the power supply.

Soft start: Allows the supply to start from zero current and/or voltage over a stated period of time during start up to prevent voltage overshoots and current imbalances.

Switchers: Power supplies using switching techniques to achieve high efficiency regulation. These techniques can have attendant EMI/RFI problems.

Tracking: The maintaining of fixed ratios between multiple outlets despite variations in line, load or temperature. Particularly important in supplies with symetrical (+)(−) outputs.

Transient protection: Circuitry designed to protect the supply from high amplitude line transients. Generally expressed in terms of peak voltage and maximum transient time duration.

NOMOGRAPH VOLTAGE DROP

NOMOGRAPH OF VOLTAGE DROP ACROSS LOAD SUPPLY LEADS (as a function of wire size and load current)

THIS NOMOGRAPH CAN BE USED TO FIND:

Maximum current carrying capacity recommended for any standard wire size.*

1) With a straight edge, connect from the wire size on Scale 2 to the point "A" on Scale 3.
2) Read I_{max} on Scale 1.

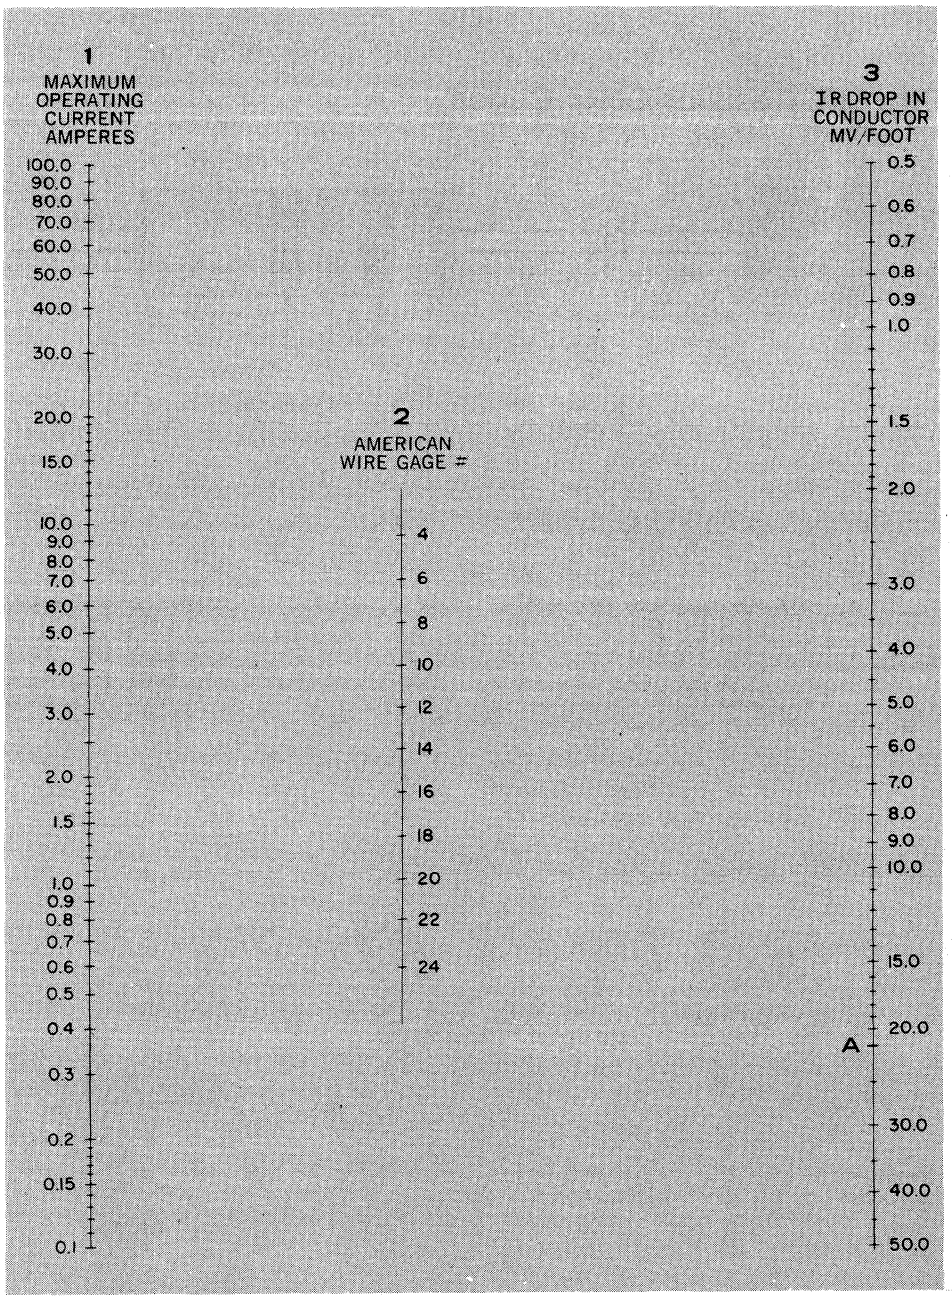
Voltage drop in millivolts per foot for known wire size and operating current.

1) With a straight edge, connect the known current on Scale 1 and the wire size on Scale 2.
2) Read voltage drop on Scale 3.

Wire size required for known operating current and known maximum tolerable voltage drop across supply leads.

1) Determine maximum tolerable drop in millivolts **per foot** of lead (sum of positive and negative leads).
2) Connect the value on Scale 3 (as determined in step 1) to the known current on Scale 1.
3) Read wire size on Scale 2.

** Based on an arbitrary minimum 500 circular mils per ampere. High-temperature class insulation will safely allow higher currents.*



NOTE: A voltage stabilized Power Supply controls the voltage across its output terminals. Hence, the wire conductors used to connect the load must be considered as part of the load. At high load currents, the voltage drop across the supply leads may appreciably degrade stablization at the load. Kepco models equipped with the *remote error sensing* feature can automatically compensate for voltage drops of up to 500 mV across each load supply lead.

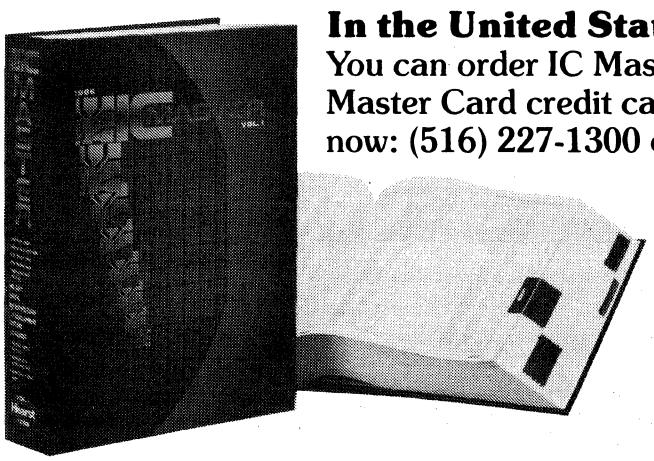
IC MASTER BELONGS ON YOUR BOOKSHELF

If you don't have your own IC MASTER, you can obtain your own copy by ordering now. Write for your own copy or order by telephone as described below.

IC MASTER is a two-volume set of technical data carefully organized to direct the engineer to the integrated circuits and related products that are closest to his specific needs. It is the surest and fastest way to find the optimum devices to answer an engineering design requirement. By ordering now, you won't have to borrow or search for IC MASTER the next time you need it.

Typical Use of IC MASTER
Can an engineer find out who makes a 256K dynamic RAM with an access time of 120 nanoseconds or faster in less than 30 seconds? He can if he turns to the Memory section of IC MASTER and looks for the 256K organization (words and bits per word) that he needs. Because each device is listed in order of access time, he can easily determine the devices that satisfy his speed requirements.



In the United States only:
You can order IC Master simply by charging it to your VISA or Master Card credit card. To place your order (USA only) call now: (516) 227-1300 or (408) 249-6800.

Or mail your order to

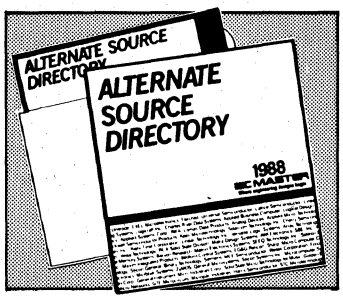
ICMASD...IC Alternate Source Directory

If you've used the IC MASTER, you know what the Alternate Source Directory is. Engineers tell us that it's one of the most valuable sections of the Master. The Alternate Source Directory...ASD...is now available in floppy disk form.



The electronic ASD is FAST! Just ask a question and the answer pops up in a split second.

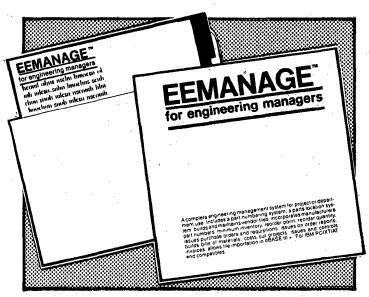
The electronic ASD is FLEXIBLE! You can add ICs and you can add comments.

You can add part numbers, prices, technical notes or anything else you like. You can customize the ASD to fit your needs and the needs of your company.

Order the 1988 Alternate Source Directory for your AT, XT or compatible. We'll send you two floppies and a very simple piece of printed documentation. Download the floppies and you're in business. All you need is a hard disk.

EEMANGE...for engineering managers

Developed by the publishers of EEM/ Electronic Engineers Master, EEMANAGE is a software program designed to make life easier for engineers and engineering managers.



EEMANAGE does many things: 1. Develops Bills of Materials 2. Assigns Part Numbers logically 3. Manages Engineering Inventories 4. Issues Purchase Requisitions 5. Relieves Engineering Inventories 6. Manages a Parts Storage System 7. Issues Engineering Change Notices 8. Interfaces with dBaseIII+ Programs.

EEMANAGE is completely menu driven. It is simple to understand and operate. Any competent secretary can be up and running on EEMANAGE in minutes.

Order EEMANAGE for your AT, XT or compatible. We'll send you one floppy and brief, very user friendly documentation.

The basic price for ICMASD or EEMANAGE is $149.50 each and includes floppy disk(s) and complete program documentation.

For immediate shipment you can order ICMASD or EEMANAGE on your VISA or MasterCard credit card simply by calling Marie Botta at (516) 227-1300.

qualified products lists-2440

"Qualified Products Lists" are issued periodically by the U.S. Government as a guide for the procurement of electronic components by government contractors. Each list contains every separately designated part that has qualified under the latest Military Specification for its class and the name(s) of the manufacturer(s) of each.

EEM is publishing the names of those North American companies that are qualified producers of one or more products in each of the lists that apply to a selected group of electronic products normally cataloged in these pages. Addresses for these companies will be found in the EEM Yellow Pages.

Judd Wire

Wire Leadership Through Irradiation

BY LAND. BY SEA. BY AIR.

Engineered to the Most Demanding Military Specifications.

- MIL-W-22759
- MIL-C-27500
- MIL-W-81044
- MIL-W-16878

Judd Wire manufactures a complete line of wire and cable for military electronic and electrical systems. Under the ZELRAD® (MIL-W-22759/32-46) and AERORAD® (MIL-W-81044/8-13) trade names, Judd can fill virtually any requirement for dual and single insulation systems including irradiation cross-linked modified ethylene-tetrafluoroethylene (XLETFE) or polyalkene and cross-linked polyvinylidene fluoride (XLPVDF) insulation systems that meet or exceed stringent military specifications.

Key performance characteristics of ZELRAD and AERORAD are:

- Lightweight.
- Small Size.
- Great Flexibility.
- Excellent High and Low Temperature Properties.
- Resistance to Flame, Mechanical Abrasion, Solder Iron, Chemical Degradation and Radiation.
- Ease of Processability.

Judd cables are comprised of ZELRAD or AERORAD wires that meet or exceed QPL military specification MIL-C-27500. Data Bus or other multiconductor cables that require special electrical, shielding or testing capabilities are available upon request.

For ground support and communications systems requiring temperature ranges from 105 °C to 125 °C, and voltage ratings to 3000, Judd offers MIL-W-16878 with FLEXRAD 125®, an irradiation cross-linked polyethylene (XLPE), and PCA, an irradiation cross-linked polyvinyl chloride (XLPVC).

Back Panel Assemblies and Headers (QPL'd to MIL-C-28754)

Malco, the originator of the metal backplane technology produces aluminum metal plates for both card edge and metal to metal contact interfaces. Using a blade and tuning fork system, known as the wrappost assembly system panel, thousands of electrical terminations can be mounted on a single WASP plate. Malco features 3 amp contacts with .025" square wire wrapposts on 0.100", 0.125" and 0.150" centers as well as 6 amp contacts with .045" square wire, wrapposts on 0.200" centers.

- High density up to 100 contacts per square inch with each contact positioned to permit use with automatic wire wrapping machines.
- Malco offers a complete line of extruded, metal and molded headers.
- Extruded headers series 440 & 441 provide reliable interconnection between the back plane and printed circuit board, selective plating, increased rigidity and maximum utilization of space.

High Density Military
H.D.S.M. Connectors

You know the problems . . . less board space . . . increased density . . . more and varied I/O. The Malco H.D.S.M. (High Density Standard Module) connector may be the solution now and through the 1990's.

The versatile H.D.S.M. provides a variety of contact types - signal - and coaxial and quantities - up to 304 High Rel Twist Pin contacts in 4 rows on .050" centers! Modular inserts allow the designer to specify a combination of contact types within the standard .360 x 4.600 shell.

The H.D.S.M. can be mounted on .500 centers. It is designed for either surface mounting or plated-through-hole mounting. Other termination options are available.

UHD, ULTRA HIGH DENSITY TWO-PIECE, SMT, MILITARY CONNECTOR

More programs have begun to use surface mount packaging techniques in order to save space and weight. The choice of connectors available to implement these designs is limited.

A major effort in the connector industry has been to develop a connector for the 3/4 ATR (size 6) line replaceable module (LRM). TI's Micro Electronics Packaging Department of the Defense Systems and Electronics Group and TI's Connector Systems Department have jointly developed the UHD family of surface mount connectors for LRM applications. The UHD connector is sized for the 3/4 ATR card. Optimum sizing provides a maximum of 344 contacts. The basic connector is of molded construction and is adaptable to fiber optic or coax contacts. It is designed to provide minimum card spacing where pin shielding is not required. A metal shell version is available. The uniquely designed motherboard (receptacle) connector utilizes an integral termination "organizer" and provides for plus or minus .020" lateral float with minimum force during the thermal clamping cycle. This insures intimate surface contact at the chassis to card thermal interface. Limited UHD production and preliminary specifications are now available. DESC drawings are now being initiated. Second sources are being secured at this time. The connector is available in half-length sizes with 172, 128, or 84 pins and full length sizes with 344, 256, or 168 pins.

TWO-PIECE MILITARY CONNECTOR PRODUCTS .075″ CENTERLINE × .0375″ OFFSET STRAIGHT AND RIGHT ANGLE PLUGS, STRAIGHT RECEPTACLES

An increasing number of new programs are being designed which exceed the traditional .100℄ MIL-C-55302 product offerings. Also, mature programs are being redesigned which will require increased I/O capability in the same or less available space.

In order to meet the needs of today's designer, Texas Instruments has begun introduction of a new .075″ centerline military connector series.

The wide selection of body styles, contact designs, assembly hardware, selective loading, and special variations available provides maximum flexibility.

The MIL-C-55302 qualification has begun and slash sheet approval is expected during 1989.

Samples and specifications are available now!

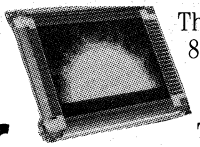
ONCE YOU'VE SEEN FUJITSU'S AC PLASMA DISPLAY, YOU'LL TAKE A DIM VIEW OF ANYTHING ELSE.



The only way our bright new 8050 display looks anything like the others is through a pair of sunglasses.

That's because the 8050 is without a doubt the brightest, most readable display in its class.

It's the first 10-inch, AC-memory, flat panel display to deliver 640 x 400 resolution with an extraordinary 44 foot-lamberts of brightness. Along with a contrast ratio of greater than 20:1. All in a package just over one inch thick.

In fact, the only thing more impressive than these numbers is looking at the display yourself. Then you'll really appreciate its exclusive solid black background. And the brightness and flicker-free clarity of text and graphics.

And what's truly amazing is that you'll get this remarkable performance under some of the worst possible conditions. Like bright sunlight. And viewing angles up to 120 degrees.

So if your application calls for the clearest images with maximum contrast, call us today at **1-800-556-1234, Ext. 238.** Inside California call, **1-800-441-2345, Ext. 238.** Or write Fujitsu Component of America, Inc., 3330 Scott Boulevard, Santa Clara, CA 95054-3197.

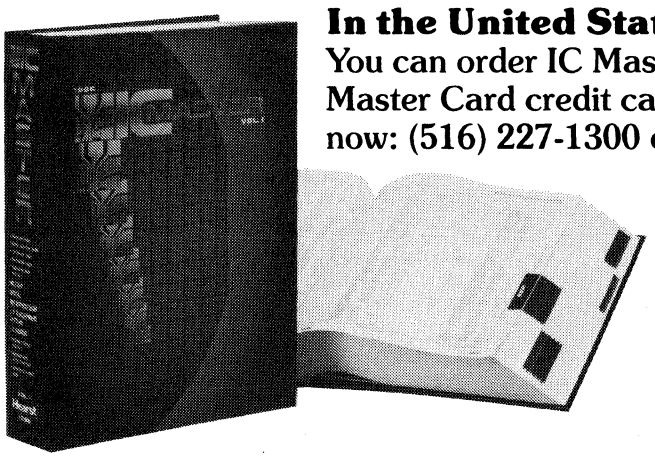
IC MASTER BELONGS ON YOUR BOOKSHELF

If you don't have your own IC MASTER, you can obtain your own copy by ordering now. Write for your own copy or order by telephone as described below.

IC MASTER is a two-volume set of technical data carefully organized to direct the engineer to the integrated circuits and related products that are closest to his specific needs. It is the surest and fastest way to find the optimum devices to answer an engineering design requirement. By ordering now, you won't have to borrow or search for IC MASTER the next time you need it.

Typical Use of IC MASTER
Can an engineer find out who makes a 256K dynamic RAM with an access time of 120 nanoseconds or faster in less than 30 seconds? He can if he turns to the Memory section of IC MASTER and looks for the 256K organization (words and bits per word) that he needs. Because each device is listed in order of access time, he can easily determine the devices that satisfy his speed requirements.



In the United States only:
You can order IC Master simply by charging it to your VISA or Master Card credit card. To place your order (USA only) call now: (516) 227-1300 or (408) 249-6800.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

READOUT ASSEMBLIES

MINI-PAK DISPLAY ASSEMBLIES

The MINI-PAK® series are gas discharge or LED readout modules, specifically designed for use on low-to-medium volume industrial or commercial instruments. The display and associated electronic drive are packaged in a black thermoplastic case available in two styles; a rear panel mount and a front panel mount. The modules are available in 1½-, 2-, 2½ and 3-digit configuration that can be mounted individually or stacked horizontally to form any number of digits. The MINI-PAK® series are designed for direct interface compatibility with TTL or LSI integrated circuits with 4 line output information in the 8-4-2-1 BCD code format.

GAS DISCHARGE SERIES CE-1000/CE-2000

The MINI-PAK® series CE-1000/CE-2000 include a 0.55" high character gas discharge display and the BCD to seven segments Decoder/Driver. The interface terminals are brought out to 14 pin dual-in-line header or socket. All components are soldered to the P.C. Board.

GAS DISCHARGE SERIES CE-3000/CE-4000

The MINI-PAK® series CE-3000/CE-4000 include a 0.55" high character gas discharge display and socket mounted BCD to seven segments Decoder/Driver. The interface terminals are brought out to wire wrap pins. The gas discharge display can be very easily and efficiently replaced, thereby, minimizing down time.

LED SERIES CE-5000/CE-6000

The MINI-PAK® series CE-5000/CE-6000 include a socket mounted 0.43", 0.625" or 0.8" character high LED display, a socket mounted BCD to seven segments Decoder/Driver and current limitting resistors, whenever applicable. The interface terminals are brought out to wire wrap pins. The series is available with or without latch or in 5 mA, 15 mA or 20 mA per segment.

The 1" LED display is supplied w/comm. anode for TTL decoders or comm. cathode for CMOS decoders. Common anode LED's are used in 2", 3", and 5½" units with either type of logic because the ULN2003A, 7 channel, Darlington driver is employed. — TTL or 5V CMOS logic is Std. for 1" displays; 12V CMOS is opt'l. TTL or 5-15V CMOS logic is standard for the 2", 3", 5½". Latch memory is Std. on all CMOS displays. The schematics for the various lamps used in all the indoor series are shown in Table 3. Consult factory for outdoor lamp schematics. The Std termination for each digit is a 14 pin DIP socket. This I/Os the BCD, logic & lamp power, and, when specified, strobe, blanking, lamp test & decimal point. Additional connection points for logic & lamp power, strobe & decimal point are provided on the drive logic board for applications requiring larger power lines or separate strobe &/or decimal point inputs (-M1 thru -M4). The L, V & G lines are bussed for all digits on ea. P.C. Bd.

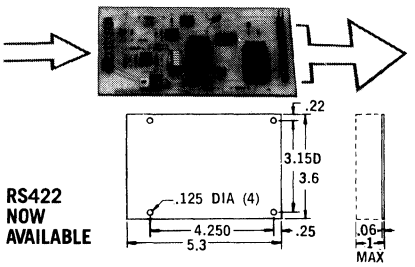
820C SERIES SERIAL ASCII INTERFACES



RS422 NOW AVAILABLE

The DIO-REY 820 Series Serial to Parallel and Parallel to Serial Converters are microprocessor based and are primarily intended for driving remote display decoders.

The input to the 820 Receiver is a Serial ASCII coded data stream at either RS232 or current loop levels. The 820 Receiver automatically adapts itself to incoming data rates over the range of 110 to 1200 baud. In addition it features a six position DIP switch which allows selective addressing of up to 64 separate receivers on one data link. The output of the receiver is six bits of data and sixteen strobe lines. The receiver, therefore, can drive either sixteen numeric or alphanumeric displays per receiver or up to 96 points in an annunciator system.

An array of sixteen, 6-bit registers may be sequentially inputed to the 820 Transmitter and converted to a serial output, for annunciator systems.

HOMALITE DISPLAY FILTERS AND SPECIFICATIONS

LOW REFLECTANCE CONTRAST ENHANCEMENT FILTERS

Product Description

In designing instruments with LED, LCD, CRT, gas discharge, plasma or vacuum fluorescent displays, an important design consideration is the human engineering factor.

For optimum contrast and readability, Homalite™ display filters are available in colors designed to meet requirements of a wide variety of displays. Glare is reduced with a low reflectance surface cast into the material —it can't chip or peel. By increasing contrast and reducing glare, the display can be read easily and accurately under varied lighting conditions.

Because Homalite materials are thermosetting plastics, the display filters are more rigid and resistant to impact, heat, abrasion and chemical attack than other plastic filters.

All our filters can be cleaned with soap and water, acetone, chlorinated and other commercial solvents or common glass cleaning preparations.

Homalite representatives can provide technical assistance to meet your design requirements. Sample chips in various colors are available upon request.

Grades of Material

All grades shown below are available with LR (low-reflectance) surface.

	Description	Properties	UL Flammability Classification
H-100	Thermosetting polyester. Available in all colors.	General purpose applications. Excellent resistance to chemical attack. Scratch-resistant.	UL94HB
H-101	Thermosetting polyester. Available in all colors.	For high temperature applications. This self-extinguishing, fire retardant grade offers good heat distortion resistance.	UL94V-0 (thicknesses ⅛″ and over) UL94HB (thicknesses up to ⅛″)
H-911	Allyl diglycol carbonate. Available in clear and selected colors.	Highest optical qualities. Abrasion resistant—30 to 40 times more scratch-resistant than acrylics.	UL94HB

Low Reflectance Surface

Homalite filters reduce specular reflection associated with conventional face plates and filters. Unlike other filters, the low glare surface of Homalite filters is cast into the material. This surface is **not** a lamination or coating, so it cannot separate, chip, peel or rub off.

The Homalite low-reflectance surface, referred to as "LR", minimizes glare and improves readability.

Two low-reflectance surfaces are available.

LR-72—The most light diffusing surface. For mounting as close as possible to the light source, up to ½″ distance.

LR-92—For mounting from ½″ to 2″ from the light source.

INSTRUMENT DISPLAY FILTERS

Sizes and Forms

Homalite can fabricate display filters to meet your requirements. This includes cutting to size, drilling holes, milling slots, steps and beveled edges, etc. Parts can be silkscreened, mirrored or coated for RFI/EMI shielding. See standard CRT filter sizes.

Homalite materials are available in standard thicknesses of 1/16″, 3/32″, and ⅛″. Other thicknesses from 1/32″ to over 2″ are available upon request.

A protective, removable masking is available on one or both sides of fabricated parts. If masking is required, please specify when ordering.

If you choose to fabricate your own display filters, you can order Homalite materials in sheet form in two sizes: 21″ x 31″ and 33″ x 45″. Sheets will be supplied with masking on both sides. Instructions for fabrication are available upon request.

Filter Colors

Homalite filters are available in a wide range of standard colors which are designed for use with commonly available displays. Homalite can also color match and prepare filter material for specific application requirements or to duplicate the color of existing filters. Choosing the proper color will give sharp, clear characters with enhanced contrast between the information displayed and the background.

Light Emitting Displays and CRT'S

An important consideration in choosing the filter shade is the environment where the instrument will be used. For instance, if the display will be viewed in bright sunlight, you would select a darker shade than if the display were used in a room with fluorescent lighting.

Standard colors and spectral curves are as displayed. However, we would be pleased to match a specific color or work with you on a shade that meets your special application requirements.

Liquid Crystal Displays

Although LCD's do not emit light, reduction of glare from ambient light greatly improves readability. Homalite materials with the LR finish in clear or light gray (1295) are recommended for this type of display.

CRT FILTERS

Typical filter configurations for CRT sizes 5″ to 19″ are shown below in contoured and rectangular shapes. For 5″ to 15″ filters, the standard thickness is 1/16″. For 19″ filters, we recommend 3/32″ thickness material. Other thicknesses available upon request.

When ordering filters, the letter C or R after the (Diagonal) Filter Size denotes contoured or rectangular shape. The spherical radius shown for each size applies to both contoured and rectangular shapes.

Homalite will fabricate filters to the exact size and shape requirement of specific monitors. For best results, please include measurements (width, length and spherical radius) to ensure proper fit. A mechanical assembly drawing of the monitor showing dimensions and mounting arrangements can be useful in establishing the proper configuration for your filter.

Filters can be supplied with or without adhesive tape for mounting.

Industrial Products Division

Intelligent Displays, and Much More
IEE's Industrial Products Division offers as standard products a broad range of intelligent display modules, incorporating a variety of display technologies. Nearly all include on-board intelligent controllers to handle display control, refresh, and character generation. Most modules have on-board power converters. These features greatly simplify the customer's design tasks.

We also offer a wide assortment of accessories, including power supplies, contrast-enhancement filters, cables/connectors, and serial data converters. This comprehensive range of products, combined with the total customer support offered by our technical staff, helps make IEE the "one-stop" source for all your display needs.

Vacuum Fluorescent Family
The unbeatable combination of outstanding appearance, ease of use, and a broad choice of formats, have helped our FLIP™ intelligent VF display modules find wide use in applications such as industrial, medical and test equipment.

Display fields range from 10 to 240 bright, easy-to-read characters. The display color is a pleasant blue-green which may be filtered to any of a range of colors.

The FLIP product family includes 14-segment and "No-Frills" budget lines, the "Industrial Strength" FLIP line, several ruggedized models, and a group of extended operating-temperature range models. Our newest models take advantage of surface-mount technology, for the ultimate in compact packaging.

Liquid Crystal Family
IEE's newest display technology is embodied in the DAYSTAR NOVA™ line of high-performance, ASCII-input LCD modules. Engineered for high reliability, they feature extra-large characters and an extra-wide operating-temperature range (−30 to +85°C).

These low-power, compact modules are ideal for battery-operated portable equipment, especially when sunlight readability is a must. Optional electroluminescent back-lighting makes night-time viewing easy.

The SUPERNOVA™ family uses advanced LCD technology in the transmissive mode to create extra-large (4 to 6") characters for signs, message centers, and factory-floor annunciators. Many eye-catching colorful effects are possible using fluorescent backlighting.

DC Plasma Family
Especially well-suited to high-information-content applications, ARGUS™ DC plasma display modules use neon-orange or green 5×7 dot matrix panels to produce bright, easy-to-read, alphanumeric characters. Careful attention to package design has resulted in very compact modules.

New ARGUS AIM™ modules require only low-voltage (+5 and +11 to 29VDC) power supplies. High-voltage IC drivers ensure maximum reliability and power efficiency.

Interactive Touch-Entry Display Modules
The PEP™ family of interactive touch-entry display modules includes models based on ARGUS and FLIP displays. These innovative operator interface modules helped establish the current trend towards touch-interactive displays.

The newest PEP model is based on a 6×40 VF display, and features a sealed bezel and fixed-legend switch areas. On the drawing boards now are several "full-dot" graphic-type PEP modules using advanced display technologies.

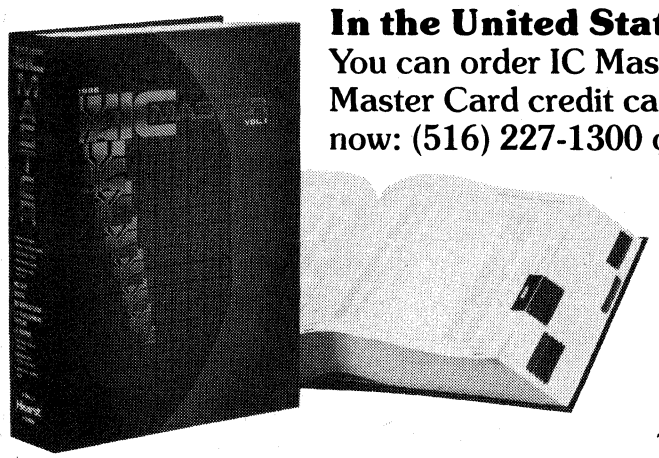
IC MASTER BELONGS ON YOUR BOOKSHELF

If you don't have your own IC MASTER, you can obtain your own copy by ordering now. Write for your own copy or order by telephone as described below.

IC MASTER is a two-volume set of technical data carefully organized to direct the engineer to the integrated circuits and related products that are closest to his specific needs. It is the surest and fastest way to find the optimum devices to answer an engineering design requirement. By ordering now, you won't have to borrow or search for IC MASTER the next time you need it.

Typical Use of IC MASTER
Can an engineer find out who makes a 256K dynamic RAM with an access time of 120 nanoseconds or faster in less than 30 seconds? He can if he turns to the Memory section of IC MASTER and looks for the 256K organization (words and bits per word) that he needs. Because each device is listed in order of access time, he can easily determine the devices that satisfy his speed requirements.



In the United States only:
You can order IC Master simply by charging it to your VISA or Master Card credit card. To place your order (USA only) call now: (516) 227-1300 or (408) 249-6800.

OPTOELECTRONIC PRODUCTS—FLUORESCENT INDICATOR PANEL DISPLAYS

Vacuum Fluorescent Indicator Panels are more effective and reliable than other display systems. An exceptionally wide variety of sizes, styles and configurations are available from NEC. The table below provides a brief glimpse at a few selected standard types. Hundreds of others are available.

The principal advantages of FIPs is their inherent brilliance and sharpness. They can be driven directly from MOS ICs and operate at voltages as low as 10V.

The normal color of an FIP is blue-green. This is filterable to red, orange or yellow with very little visual loss. The basic blue-green color is far less fatiguing to the human eye than colors in the red-orange end of the spectrum.

For complete details on NEC FIPs, ask for the FIP Selector Guide.

OPTOELECTRONIC PRODUCTS,—FLUORESCENT INDICATOR PANEL DISPLAYS

World's first Chip-In-Glass FIP Modules give you beauty that lasts.

NEC has removed something that used to stand between you and truly reliable fluorescent displays. We took the anode and grid driver ICs out of their packages. Then mounted the bare chips directly on the display substrate. Result: a trimmed-down, cost-efficient display that solves a host of reliability problems.

Now, for the first time, the display drivers are on-board —in a vacuum-sealed glass envelope that provides the ideal protective environment. On-board ICs permit a drastic reduction in the number of lead terminals. By reducing leads, we further increase dependability. Create a more compact design. And lower costs to you.

MINI-MODULES: UP TO 50% SMALLER AND 33% LIGHTER.

We use surface-mount technology to trim our modules even more. Board height is up to 50% less than conventional modules and weight is reduced by up to 33%.

Chip-In-Glass FIPs come in four models: 20 characters x 1 line; 20 x 2; 40 x 1; or 40 x 2. All models offer a 5 x 7 dot character format. The display is brilliant and easy to read from virtually any angle.

FIPs run on a 5V power source. Interface readily with your system bus. Execute numerous commands. Fonts include: ASCII-7, ECMA-7 (General European, German, Scandinavian, Spanish) and JIS.

If you want beauty that lasts through the years, get the bare facts on NEC's Chip-In-Glass FIP modules.

SHARP

EL Display Units

Sharp's EL Display Units Pave the Way for a New Generation of Displays

Sharp's Electro-Luminescent (EL) displays—thin, solid-state, light-emitting panels—stand at the leading edge of display technology. Through innovative technology, Sharp has developed EL display units which combine the high contrast and brightness of CRTs with the light weight and thinness of LCDs. Sharp gives you the display of your dreams.

Easy-to-Read and Easy on the Eyes

Sharp's EL display units feature the yellow-orange "amber" color generally acknowledged as being easiest on the eyes. Based on innovative technological breakthroughs, Sharp has succeeded in creating high-definition El display units with a resolution of 3 lines per millimeter and dot density providing the same detail as 640 x 400-dot CRTs. Moreover, these display units feature a flickerless, easy-to-read, flat screen. Users need not suffer from eye fatigue when using computers for long periods of time.

Wide Viewing Angle

Sharp's all solid-state EL technology provides a bright, light-emitting display unmatched by conventional LCDs. The operation of these units does not depend on ambient light for illumination, allowing users to view information presented on the screen even in low-light situations. These units also offer a maximum 140°-wide viewing angle, enabling users to view undistorted character text and graphics from a wide range of positions.

High-Speed Display Capability

EL display units can display information as rapidly as conventional CRTs. By using the same simple input signals as those used by CRTs and developing simplified interface circuitry, Sharp has achieved a high-speed display that can respond far more rapidly than LCDs and virtually as quickly as high-speed response CRTs. Users can display high volumes of data or rapidly changing information on the screen in real time.

Low Power Consumption

Sharp is currently producing energy-saving display units made possible through two important developments based on original Sharp technology: high-voltage MOS driver ICs and high-efficiency thin film panel structure. Lower power consumption has also resulted from adopting new EL panel driver circuitry, optimized for maximum efficiency. Highly compact, lightweight designs are now feasible for a wide variety of information processing systems and equipment.

Lightweight, Thin, Compact, and Durable

Sharp's EL display units are constructed from durable solid-state components which have a high degree of resistance to damage caused by vibration and impact. Devices equipped with EL display units can be used under severe environmental conditions, such as outdoors in the field or in automobiles. Sharp's EL display units are the result of innovative thin-film deposition technology and high-density mounting technology. This makes them ideally suited for displays in all kinds of portable equipment.

SHARP

LCD Units

Sharp, unchallenged leader in the field of LCD units, is about to revolutionize the field.

Sharp's capacity for technological development is creating new worlds for LCD applications.

Since 1973, when Sharp introduced the use of the LCD in electronic calculators for the first time in the world, new fields of application have been rapidly opened up thanks to a series of constant technological improvements. This commitment to improvement has led to LCD units with superior readability over a wide range of adverse conditions.

As demand for large-size and high-resolution LCD units increased, Sharp responded by adding quality features, including high contrast, wide viewing angle and wide temperature range displays, all of which drew attention in various fields. Sharp's innovative approach to LCD design has led to LCD units which are lightweight, thin and power-saving for better cost performance with high reliability. Sharp's search for new possibilities in the application of the LCD has no limits.

Paper white mode Double Super Twisted LCD unit—synthesis of Sharp's LCD technology.

A large portion of the information we regularly read is in the form of black letters printed on white paper. This same format has long been deisred for the LCD, as well.

Sharp has taken the lead in developing and mass-producing a paper white mode Double Super Twisted (DST) LCD unit capable of reproducing an image close to the printed page to which we are accustomed. This advanced display, almost equivalent to a CRT, is about to change the current image of the LCD entirely.

With nearly 3 times higher contrast and a wider viewing angle compared with our conventional Super Twisted High Contrast (STHC) LCD units, this new product, with built-in CCFT backlight, is our answer to the call for brighter and clearer displays. Paper white mode DST LCD units are ideal for OA equipment, from personal computers to word processors.

SHARP

LCD Units

Sharp provides a solid line-up including 5 series with various display formats

Overview

The Sharp character type LCD unit, with built-in control LSI, operates under the control of a 4-bit or 8-bit microcomputer to display alphanumeric characters, symbols and others. It provides a solid line-up including 5 series (38 models) with various display formats, ranging from 16 characters × 1 line to 40 characters × 2 lines.

You can select models best suited to your application from the series.

In addition to the basic reflective type, backlit types (transmissive and transflective types) capable of service in low ambient light conditions are also available. We also offer a wide temperature range type which can be used in special environments (a wide temperature range).

New models added to the conventional line-up of TN-FEM (twisted nematic) type LCD units are the STHC (Super Twisted High Contrast) type designed to meet the needs of customers who require even more sophisticated display quality (still higher contrast and wider viewing angle range).

SIGNALEX®

HIGH VISIBILITY DISPLAYS

ENERGY-SAVING: Electromagnetically-operated Signalex displays require no power to maintain continuous indication. Inherently bi-stable, Signalex displays draw power only at the instant of change.

INHERENT MEMORY: Indication is maintained even with loss of power.

DIRECT ACCESS: Signalex displays can change from one number to any other—without a run-through of numbers. The unit immediately displays the transmitted number.

LOW MAINTENANCE: The rugged Signalex design assures long life and dependability. With no bulbs to replace, they are virtually maintenance-free.

HIGH-VISIBILITY: Signalex displays can be used indoors and out, in temperatures ranging from -40°C to +75°C. Their light-reflecting segments give high visibility in bright ambient light.

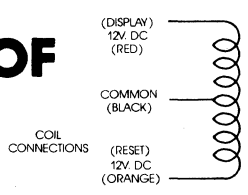
Temperature: -40°C to +75°C.

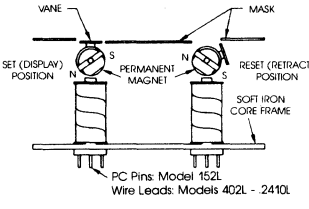
Relative Humidity: Up to 95% R.H. at any temperature in the range, provided no consideration present.

Power to Maintain Display: NONE

Vane Colors: White, Saturn-Yellow, Orange-Red Fluorescents. Black background standard. Other high-visibility colors available.

PRINCIPLE OF OPERATION





Signalex® displays operate on a well-proven electromagnetic principle. A short pulse in a coil produces a magnetic field that acts upon a permanent magnet located in a rotor, part of which is the vane itself.

The magnet is either attracted or repelled, turning the rotor and vane with it. In either display or reset position the magnetic circuit is stable so that the vane can remain in either position with no power in the coil. The permanent magnet pole is attracted to the soft iron core which will hold the vane in position until a reverse pulse is passed.

The rotor and magnet assemblies are the only moving parts in the display. Their light weight and low inertia give fast response time. High lubricity plastic bearings are used.

SIGNALEX® TYPE A

The Type A Indicator is a bi-stable electromagnetic annunciator showing alternate display faces in its window. It may be mounted for operation in any position. It is driven in either direction by 1.1 watt pulses as short as 30 ms and remains in its last position without power input until pulsed to the opposite position.

Signalex Type A indicators are used in hospital, apartment house, and commercial call boards, as well as in circuit indicators, alarm systems, and a variety of other applications.

SIGNALEX®

HIGH VISIBILITY ALPHANUMERIC DISPLAYS AND INDIVIDUAL GRAPHIC ELEMENTS

Signalex Individual Alphanumerics are bi-stable electromagnetic displays which require only a very short pulse to change position. Inherent latching memory requires no power except during the moment of change. The magnetic design permits operation of most models using 12vdc with a 2 msec. pulse and, at higher voltages, at 1 msec. or less.

The standard 7 by 5 matrix of 35 dots gives full alphanumeric capability, and is available in sizes which can create characters 4", 6", 9", 12", 16", 18" and 39" high. The flexibility of Signalex individual alphanumerics permits the creation of custom displays. In addition to the standard (7 x 5) format, the 28-dot (7 x 4) numeric format, a 23-dot (7-Bar) format, or other desired shapes may be used.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

If this is how you see LEDs, the ad is over.

The popular myth goes something like this: "An LED, is an LED, is an LED." Or: "If you've seen one, you've seen them all." And of course: "LEDs? They're commodity products."

Notions we at Dialight, steadfastly reject. And once you're familiar with our products, you'll know why.

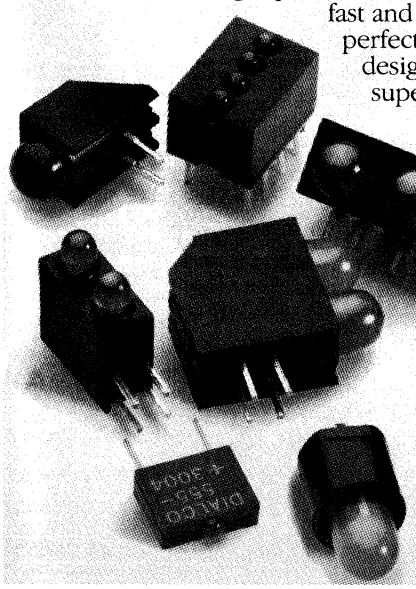
Take our Circuit Board Indicators. Single or multiple discretes aligned in a sturdy plastic housing, complete with their own current limiting resistor. The entire assembly polarity-keyed to guarantee correct insertion.

Each unit is 100% tested—ready to insert for wave soldering. No leads to bend, trim, or break. No time wasted fumbling with discretes.

Dialight pioneered the concept more than fifteen years ago to satisfy the OEM need for fast and reliable circuit board installation of LEDs. And we've been perfecting it ever since. Developing hundreds of standard and custom designs. A heritage of technological advance you can see in our new super-bright gallium aluminum arsenide units.

All meticulously engineered with the understanding that the failure of a "jelly bean product" can cost thousands in end-user downtime, and who-knows-what in customer loyalty.

The same understanding might bring you to call 201-223-9400, or write Dialight Company, 1913 Atlantic Ave., Manasquan, NJ 08736, and ask for our catalog or a product sample. At the very least, it's brought you to the real end of our ad.



DIALIGHT COMPANY A Division of North American Philips

DIALIGHT·KULKA·HHSMITH

Engineering is the only commodity we sell.

DIALIGHT LED CIRCUIT BOARD INDICATORS

PASSIVE COMPONENTS, ACTIVELY ENGINEERED

Dialight originated the idea of packaging LEDs for easy mounting on PC boards almost 15 years ago. So it's no wonder we now have the industry's widest selection.

Choose single-element LEDs in a wide range of voltages (with or without current-limiting resistors) or QUAD-LED® four-element arrays. We offer standard and high-efficiency LEDs, as well as new super bright models that are 4 times brighter than ordinary LEDs but operate on a fraction of the power.

We have just the right color for your application, too. Red, green, yellow or red/green bicolor. The combinations are virtually limitless. That's why your search for the perfect LED circuit board indicator should begin and end with the company that started it all and has been lighting the way ever since. Dialight.

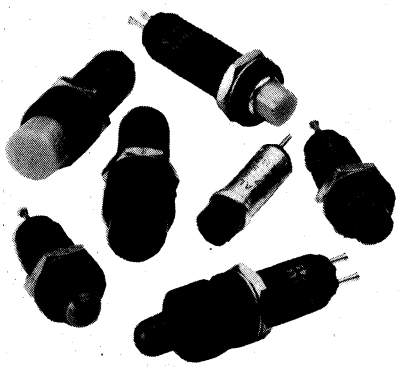
DIALIGHT INDICATOR LIGHTS

PASSIVE COMPONENTS, ACTIVELY ENGINEERED

Whatever your application calls for in indicator lights, Dialight has your number. Over 1,500,000 to be exact. That's how many different types of indicator lights we offer. One is bound to meet your specs and needs perfectly.

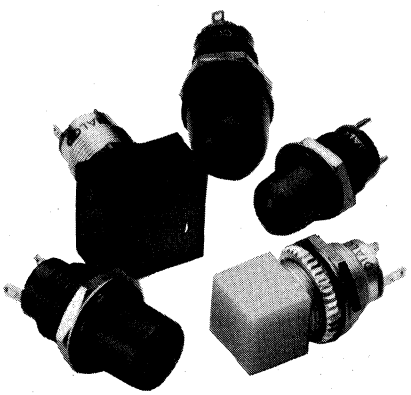
Take our ultraminiature incandescents with plug-in cartridges for example. They come in enough colors to simplify even the most complex front panels. And they make changing lamps a snap. Dialight LEDs, on the other hand, have a service life of over 100,000 hours. We also offer indicators with built-in RFI/EMI shields, open types, as well as watertight, oil-tight and press-to-test models. You'll also be happy to know that all our indicator lights meet or exceed military specs.

ULTRAMINIATURE LED, INCANDESCENT OR NEON INDICATORS—DATALITES®



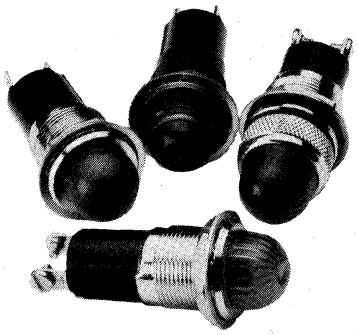
Replaceable plug-in cartridges for 1.35-125V operation. U.L. listed and CSA approved. Indicators mount in 9/32″, 3/8″ and 3/4″ (twin lamp) clearance holes. Meet or exceed MIL-L-3661. Available with red, green, amber, blue, white translucent, light yellow or colorless lenses. Wide range of lens shapes. Custom legends.

SUBMINIATURE INCANDESCENT OR NEON INDICATORS



Meet or exceed MIL-L-3661. U.L. listed and CSA approved. Mount in 15/32″, 1/2″ or 17/32″ clearance holes. Incandescent for 1.35 to 28V; neon has built-in current-limiting resistor. Choice of cylindrical, faceted, convex, flat, square and round lens shapes. Custom legends.

MINIATURE INCANDESCENT OR NEON INDICATORS



U.L. listed and CSA approved. Meet or exceed MIL-L-3661. Mount in 9/16″ and 11/16″ clearance holes. Voltages range from 2 to 120V. Available in red, green, amber, blue, white, yellow or colorless lenses. Full range of finishes.

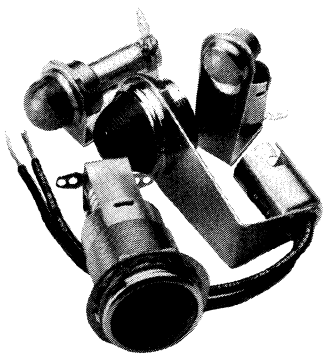
DIALIGHT INDICATOR LIGHTS

PASSIVE COMPONENTS, ACTIVELY ENGINEERED

Mount in 1″ clearance hole. U.L. listed and CSA approved. Meet or exceed MIL-L-3661. Incandescent for 2 to 250V; neon has built-in current-limiting resistor. Screw-on or friction-fit lens caps. Bayonet lock caps also available. Mechanical dimmer caps or light shield lens cap available on some models. Choice of flat, convex, torpedo, large torpedo, faceted, torpedo faceted or dome lens shapes.

OPEN TYPE INDICATORS



Mount in 7/16″, 11/16″ or 1″ clearance holes. 2 to 250V models available depending upon series. Tamper-proof construction is available. Choice of flat, convex, faceted, stove-pipe or cylindrical lens shapes.

OIL-TIGHT INDICATORS

U.L. listed and CSA approved. Three retained elastomer seals of inert material, consisting of a gasket and two "O" rings, make these indicator lights resistant to permeation by oil, water, dust or fumes. Thus, assuring high reliability in harsh environments. Subminiature and miniature incandescent and neon lamps mount in 15/32″ and 11/16″ clearance holes. Large incandescent and neon lamps mount in 1″ or 1-3/16″ clearance holes. Available in red, green, yellow, blue, white translucent, light yellow and clear colorless. Positive or negative film discs with words, numerals or letters may be ordered for use with some models. Wide range of voltages and specifications available.

PRESS-TO-TEST INDICATORS

Positive safety factors are provided by patented built-in Press-To-Test indicators. Lamps can be checked instantly and accurately without removing them from their assembly. 4-terminal assemblies are available with all indicators and are particularly useful for remote applications. Subminiature, miniature and large Press-To-Test indicators are available for mounting in 15/32″, 5/8″ and 1″ clearance holes respectively. Choice of red, green, yellow, blue, white translucent, light yellow and clear colorless lens colors. Patented shutter-dimming device available on most models. Hot-stamped or engraved legend can be supplied on flat lenses. Meet or exceed QPL approval. NVIS and secure lighting compatible assemblies also available.

DIALIGHT LED READOUT DISPLAYS

PASSIVE COMPONENTS, ACTIVELY ENGINEERED

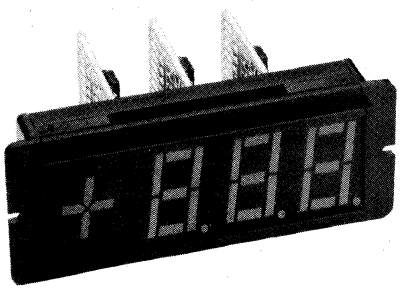
Dialight offers three basic types of LED readout displays: complete assemblies, modules and bezel kits, and discrete readouts. All are excellent choices where power is a limiting factor and IC compatibility, ultra reliability and packaging density are prime requirements.

Readouts come in a variety of sizes, ranging from .270″ to .600″ in character height. Available styles include: 7 segment, hexadecimal, alphanumeric and custom symbols.

Typical viewing distance, in normal ambient, ranges from 10 to 25 feet, with brightness a current variable. Special Dialight filters provide excellent character enhancement, permitting use in higher illumination environments (excluding direct sunlight).

Because Dialight readout displays are virtually immune to shock and vibration, they're particularly valuable in rugged applications. Their solid-state construction offers life measured in years.

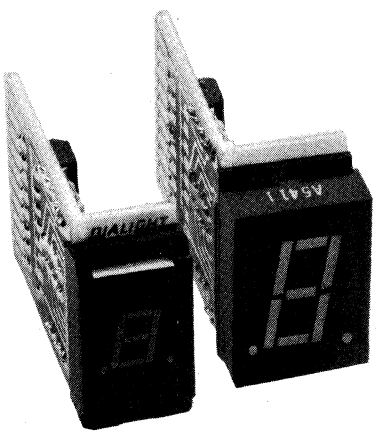
COMPLETE LED ASSEMBLIES



Complete assemblies significantly reduce the design time and cost normally associated with mounting and driving displays. They come complete with readouts and drivers mounted to PC boards in a bezel, making panel mounting easy. They also require only a 5 or 12 VDC power supply and BCD inputs. And they can be wired directly or by using edge-card connectors.

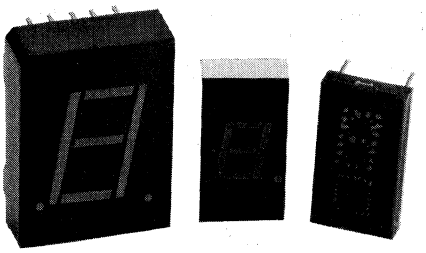
Attractive and bright, these LED readouts have non-glare windows to further enhance visibility. Each assembly is available with anywhere from one to 20 digits or status indicators. Character size ranges from .270″ to .600″ in height. To further increase design flexibility, drive circuitry is available with optional latch or counter. Also available with hexadecimal decoder with latch and CMOS decoder with latch. In addition, polarity indicators are an option. And optional spacers or specialty status symbols can be accommodated for custom assemblies.

LED MODULES



The same modules used in Dialight complete assemblies can be ordered separately, along with easily assembled bezel kits. This allows users to make their own custom displays with a minimum of parts, money and effort. Modules are also available in panel mount types for use without a bezel.

DISCRETE LED READOUTS



Discrete readouts are available in .270″, .300″ and .600″ character heights. Choose from seven segment, hexadecimal with integral drive circuitry and alphanumeric styles. Each readout offers high brightness with a wide viewing angle. Standoffs also allow for easy flux removal from PC boards after wave soldering.
